Top Skills

Cloud Architecture
Distributed System Design
CI/CD & DevOps

Languages

Sinhalese (Native or Bilingual)
English (Full Professional)

Certifications

Microsoft AZ-204 Cert Ready
Developing ASP.NET MVC 4 Web
Applications - 70-486
Learning Kubernetes
ASP.NET Core: Test-Driven
Development

Buddhika Gunasekera

Senior .NET & Azure Engineer | Distributed Systems, Event-Driven
Architecture, API Design, CI/CD
Sydney, New South Wales, Australia

Summary

. & with 8+ years building scalable, cloud-ready applications across distributed systems, API design, and modern CI/CD. I focus on designing clean, reliable backend architectures and delivering end-to-end solutions that balance performance, maintainability, and real-world impact.

I enjoy solving complex engineering challenges — from orchestrating microservices and event-driven workflows to refining developer experience and building intuitive front-end flows with Angular. My work is grounded in clarity, ownership, and continuous improvement.

Currently building , a cloud-hosted engineering productivity platform showcasing distributed architecture, Azure integration, secure authentication, and automated CI/CD pipelines.

- : Azure App Service, Functions, Service Bus, Container Apps
- : API design, distributed systems, clean architecture
- / : Azure DevOps, YAML pipelines, automated build/test/deploy
- : Angular, Angular Material, modern UI frameworks
- & : SQL tuning, modelling, efficient query design

- Building impactful systems that enhance productivity and streamline workflows
- Solving complex challenges with scalable, maintainable engineering solutions
- Continuous learning to stay ahead in cloud, architecture, and modern development

I'm passionate about creating systems that feel simple on the surface but are engineered with depth, intention, and long-term scalability.

Experience

Self-employed

Independent Software Engineer (Self-Driven Projects)

June 2025 - Present (1 year)

Sydney, NSW

— DevPulse (Cloud-Hosted Engineering Platform, MVP Delivered)

: Independent Software Engineer

During a period of health recovery and focused upskilling, I designed and built DevPulse — a cloud-hosted engineering productivity platform showcasing modern distributed-systems architecture, secure authentication, and full CI/CD automation.

- a distributed microservices system (6 APIs: User, Task, Mood, Journal, Journal Link, Orchestrator) using .NET 8, CQRS with MediatR, FluentValidation, and DB-per-service design.
- event-driven communication with Azure Service Bus, enabling reliable messaging and orchestrated workflows.
- automated CI/CD pipelines in Azure DevOps to build, test, containerize, and deploy services to Azure App Service and Azure Container Apps, integrating SonarCloud scans.
- backend services using Docker, publishing images to Azure Container Registry with automated release pipelines.
- secure authentication using Microsoft Entra External ID, implementing OAuth 2.0 PKCE, authorization code flow, and backend token exchange.
- Azure services including Key Vault, Azure SQL, Cosmos DB, Azure Storage, API Management, and Azure Static Web Apps for secrets, telemetry, data storage, and frontend hosting.
- distributed tracing and debugging with Serilog, writing logs to local files, Azure Blob Storage, and Application Insights.

- the frontend using Angular 20, MSAL.js, and Angular Material, delivering secure login, token handling, and responsive UI components.
- dual repositories across Azure DevOps and GitHub, maintaining clean branching strategies, PR workflows, and automated testing with xUnit, Moq, and FluentAssertions.

Prysmian

Senior .NET Developer (Contract)

December 2024 - May 2025 (6 months)

Liverpool, NSW

: TDR (ASEAN Region)

: Senior .NET Developer (Contract)

- - -- — requirements gathering, workflow design, requirement conflict resolution, development, UAT/Production deployment, stakeholder demonstrations, and regional user training.
- - , enabling support for Indonesia, Thailand, and Malaysia operations, and leading analysis, code updates, and full-cycle deployments across UAT and Production (IIS).
- - to automate cable certification workflows, improving QA accuracy and reducing manual processing (ASP.NET, VB.NET, C#, SQL, Bootstrap).
- - using VBScript and ADO.NET, enabling accurate, low-latency data flow into the ASEAN reporting database.
- - to validate requirements, support commissioning, and ensure smooth adoption across regional sites.

C#, ASP.NET, VB.NET, SQL Server, ADO.NET, VBScript, IIS, JavaScript, Bootstrap

UTS College

Sessional Lecturer - Diploma of Information Technology

May 2024 - December 2024 (8 months)

Sydney, New South Wales, Australia

- lectures on application design, software programming, and database architecture, with a strong focus on MSSQL querying and relational modelling.
- core programming concepts including Java OOP, Java Swing for UI development, MVC, and the Observer Pattern.
- students through database normalization, SQL querying, and practical lab exercises to strengthen foundational engineering skills.
- student learning through hands-on demonstrations, problem-solving sessions, and structured feedback to improve assignment quality and conceptual understanding.

&

Java, Java OOP, Java Swing, MVC, Observer Pattern, MSSQL Server, SQL querying, database normalization, relational databases, Python (introductory), JavaFX

Serendip Software

6 years 1 month

Senior Dotnet Developer

April 2020 - March 2024 (4 years)

—

: Full Stack Developer

- , , custom WPF GUIs for composing, searching, replying, and managing emails (C#, WPF, XAML, MVVM).
- a Windows Service to track incoming business emails via Gmail API, enabling real-time monitoring and metadata processing (C#, .NET, Azure SQL).
- email processing performance by improving SQL queries, migrating logic to stored procedures, and leveraging multi-threading (C#, EF, SQL Server).

—

: Senior Engineer

- a development team to build a Single Page Application for microfinance loan management, ensuring seamless user workflows (TypeScript, Angular, Angular Material, Bootstrap).

- end-to-end system development from requirements to deployment, using Repository + Unit of Work patterns for clean DB interactions (ASP.NET Core API, EF, Azure SQL).
- Azure cloud integration, improving API performance and database reliability for financial operations (Azure SQL, Git, Azure API Service, Azure Static Web Apps).

: Senior Engineer

- a custom Twilio webhook triggered by driver phone calls, enabling automated parking reservations (C#, ASP.NET Web API, Twilio API).
- Speech-to-Text AI to capture and process driver responses, improving usability and reducing manual intervention (IBM Watson, Google Speech-to-Text).
- a fully automated IVR workflow for reservations, payments, and email receipts, streamlining end-to-end parking operations (Azure SQL, EF).

ASP.NET Web API, C#, WPF (MVVM), Entity Framework, SQL Server, Azure, Azure Dev Ops CI CD, TypeScript, Angular, Angular Material

.NET Developer

March 2018 - March 2020 (2 years 1 month)

United Kingdom

: Software Engineer

- ADVAM payment gateway into the mobile app, enabling secure online transactions (C#, Xamarin Forms, XAML, ADVAM HTTP services).
- with the ADVAM team to ensure Level 1 PCI DSS compliance for secure payment processing.

: Software Engineer

- an OCR module to extract vehicle registration numbers from entry photos, automating identification (C#, Tesseract OCR, SQL Server).
- Google Maps API for dynamic car park searches and interactive mapping (ASP.NET MVC, Google Maps JS API, Web API, Ninject DI, EF).
- MVC Razor Views for CRUD operations, improving usability and workflow efficiency (ASP.NET MVC, Kendo UI, jQuery).

: Software Engineer

- a legacy system by migrating from ASP.NET to AngularJS, improving performance and UI responsiveness (C#, AngularJS, Web API, EF, Azure SQL).
- Hebrew language localization, enabling full bilingual support (C#, XML).

C#, ASP.NET MVC, Xamarin Forms, Twilio, Tesseract OCR, Google Maps API, jQuery, Bootstrap, SQL Server

Allion Technologies (Pvt) Limited

Senior Software Engineer

March 2017 - March 2018 (1 year 1 month)

Colombo, Western, Sri Lanka

: Senior .NET Software Engineer

- a PDF document-generation module for letters and email attachments, improving automation and reducing manual processing (C#, ASP.NET Web API, EF, SQL Server, iTextSharp, wkhtmltopdf).
- AngularJS UIs to deliver an intuitive, responsive user experience across insurance workflows (AngularJS, Azure SQL, Git, Azure App Service).

ASP.NET Web API, C#, AngularJS, Entity Framework, SQL Server, iTextSharp, wkhtmltopdf, Azure App Service

LCH

Senior Software Engineer

August 2016 - February 2017 (7 months)

London, England, United Kingdom

—

: Senior .NET Software Engineer

- , , new intranet features, improving usability, navigation, and operational efficiency for internal teams.
- Disaster Recovery (DR) testing to evaluate system robustness and scalability across multiple data centres, optimizing server distribution and failover readiness.
- legacy components using Classic ASP, ADO.NET, and SQL Server, ensuring compatibility and performance improvements across the intranet ecosystem.

C#, ASP.NET, Classic ASP, ADO.NET, SQL Server, IIS, jQuery, JavaScript

University of Brighton

.NET Software Engineer

April 2015 - June 2016 (1 year 3 months)

—

: .NET Software Engineer

- -- , including requirements gathering, application & database design, coding, testing, bug fixing, and stakeholder communication (AngularJS, ASP.NET MVC Web API, C#, SQL Server, Entity Framework).
- the BCMY Stock Management Single Page Application along with a supporting Currency Windows Service, improving operational efficiency and automation.

C#, ASP.NET Web API, AngularJS, Entity Framework, SQL Server

JOHN KEELLS IT

Solutions Developer

May 2013 - April 2015 (2 years)

Colombo

— ()

: Software Engineer

- a priority-point calculation system for banking customers, covering the full SDLC from requirements to deployment (ASP.NET MVC, jQuery, EF, SQL Server, IIS).
- with business stakeholders to refine rules, improve accuracy, and ensure seamless integration with existing banking workflows.
- system performance and maintainability through optimized SQL queries, structured EF usage, and clean MVC architecture.

C#, ASP.NET MVC, jQuery, Entity Framework, SQL Server, IIS, Tortoise SVN, Git

Education

University of Greenwich

Master of Science - MS, Computer Software Engineering · (October 2011 - November 2012)

Edith Cowan University

Double Major In Computer Science and Software Engineering, Software Engineering · (2006 - 2009)
